

ASSIGNMENT-DAY-8

Question 2

Implement push, pop and find the minimum element in a stack in O(1) time complexity.

```
#include <iostream>
```

```
#include <stdlib.h>
```

```
using namespace std;
```

```
/* A simple stack class with
```

```
basic stack functionalities */
```

```
class Stack {
```

```
private:
```

```
    static const int max = 100;
```

```
    int arr[max];
```

```
    int top;
```

```
public:
```

```
    Stack() { top = -1; }
```

```
    bool isEmpty();
```

```
    bool isFull();
```

```
    int pop();
```

```
    void push(int x);
```

```
};
```

```
/* Stack's member method to check
```

```
if the stack is empty */
```

```
bool Stack::isEmpty()
```

```
{
```

```
    if (top == -1)
```

```
        return true;
```

```
    return false;
```

```
}
```

```
/* Stack's member method to check
```

```
if the stack is full */
```

```
bool Stack::isFull()
```

```
{
```

```
    if (top == max - 1)
```

ASSIGNMENT-DAY-8

```
    return true;  
  
    return false;  
}
```

```
/* Stack's member method to remove  
an element from it */  
  
int Stack::pop()  
{  
    if (isEmpty()) {  
        cout << "Stack Underflow";  
  
        abort();  
    }  
    int x = arr[top];  
    top--;  
    return x;  
}
```

```
/* Stack's member method to insert  
an element to it */  
  
void Stack::push(int x)  
{  
    if (isFull()) {  
        cout << "Stack Overflow";  
        abort();  
    }  
    top++;  
    arr[top] = x;  
}
```

```
/* A class that supports all the stack  
operations and one additional  
operation getMin() that returns the  
minimum element from stack at  
any time. This class inherits from  
the stack class and uses an  
auxiliary stack that holds minimum  
elements */
```

ASSIGNMENT-DAY-8

```
class SpecialStack : public Stack {
```

```
    Stack min;
```

```
public:
```

```
    int pop();
```

```
    void push(int x);
```

```
    int getMin();
```

```
};
```

```
/* SpecialStack's member method to insert
```

```
an element to it. This method
```

```
makes sure that the min stack is also
```

```
updated with appropriate minimum
```

```
values */
```

```
void SpecialStack::push(int x)
```

```
{
```

```
    if (isEmpty() == true) {
```

```
        Stack::push(x);
```

```
        min.push(x);
```

```
    }
```

```
    else {
```

```
        Stack::push(x);
```

```
        int y = min.pop();
```

```
        min.push(y);
```

```
        if (x < y)
```

```
            min.push(x);
```

```
        else
```

```
            min.push(y);
```

```
}
```

```
}
```

```
/* SpecialStack's member method to
```

```
remove an element from it. This method
```

```
removes top element from min stack also. */
```

```
int SpecialStack::pop()
```

```
{
```

```
    int x = Stack::pop();
```

```
    min.pop();
```

ASSIGNMENT-DAY-8

```
    return x;  
}  
  
/* SpecialStack's member method to get  
minimum element from it. */  
  
int SpecialStack::getMin()  
{  
    int x = min.pop();  
    min.push(x);  
    return x;  
}  
  
/* Driver program to test SpecialStack  
methods */  
  
int main()  
{  
    SpecialStack s;  
    s.push(10);  
    s.push(20);  
    s.push(30);  
    cout << s.getMin() << endl;  
    s.push(5);  
    cout << s.getMin();  
    return 0;  
}
```
